

User Interface Considerations

Interface must be touch or voice activated
Interface should have “personality” and a name that the user can interact with - similar to a Siri
feedback must be audible or tactile
has to be easy to use
Verify request with user - no Siri misunderstandings for requests
Austin Lantz

Voice Commands

understand voice commands
Voice should be configurable
Should understand and provide feedback in multiple languages
Austin Lantz

User Community Acceptance

Work with existing foundations to test ideas with real blind people
Talk to users to find out most desired or helpful features
Austin Lantz

Desire

Needs to filter noise
Needs to have provide desired pictures
should interact with applications
must interact with guide provide guidance to impaired who are outside
